# Different perspectives of Aasha

## Management Perspective

Hospital management systems revolves around patients and maintenance and management of the data generated determines the efficiency of any Hospital Management System. Aasha is designed to store, manage and analyze various kinds of data generated by patients, both in-patient and out patient. The following diagram gives you an idea of the various kinds of details that can be collected and integrated during the course of the patient's association with your hospital. Details are:

### Medical records

- Doctors treated
- Lab, X-Ray, Scan details
- Surgery history
- Medicines prescribed/used
- Discharge summaries
- Electronic case sheets

### Patient Ledgers

- Billing details
- Credit Details
- Estimates

Hospital management is delegated the duty of providing adequate resources to ensure the well being of all the various aspects of healthcare. They are vested with the responsibility of tending to all operational issues and it is imperative that all the data is made available to them in readable and practical formats. Features provided for the management are:

### Patient care

- Patient reconciliation facilities
- Patient relationship features

### Human Resource Management

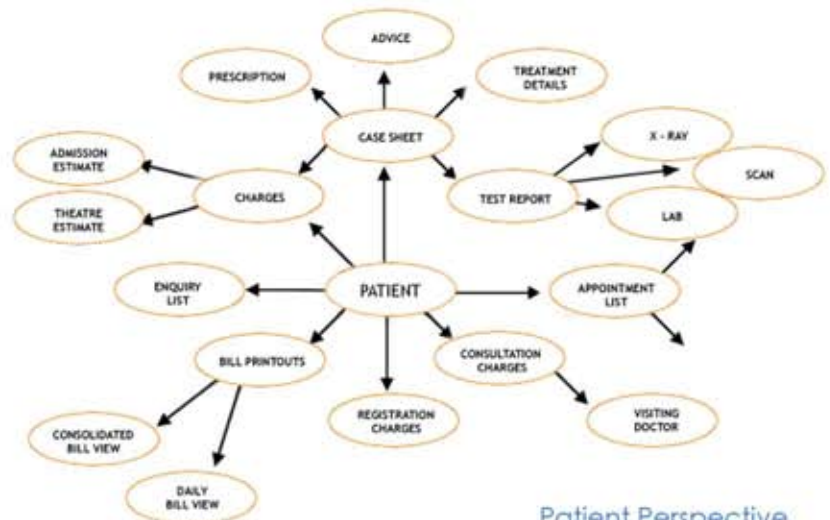

- Staff management
- Payroll management

### Inventory Management Systems

- Laundry Maintenance systems
- Stores management systems
- Vehicle Management systems

### Financial Accounting

- Purchase management
- Maintenance of various ledgers and statements
- Incorporation of insurance management

## Patient Perspective

Doctors are an integrated part of any hospital. An effective data management will help doctors provide better service to the community. Proper organization of data will also help the management adequate facilities and infrastructure for their cause. The system also allows the management to analyze and monitor the doctor's association with their hospital from various angles. The details are organized to provide information along these dimensions:

## Doctors Perspective

### Practice History

- Consultation histories
- Admission details
- Surgery Details
- Prescription details
- Investigations prescribed

### Appointments and scheduling

- Appointments (OP)
- Daily Waiting lists
- Daily Consultation lists

# Aasha 1.0 Professional

Aasha 1.0 Professional is the ideal solution for clinics having a smaller number of beds. The professional version contains the basic modules that are usually required by these establishments and allow them to capture adequate automation at down to earth prices. Aasha 1.0 Professional is designed to pack a punch without burdening the customer.

Small hospitals, polyclinics and small specialty centers will find this very useful and offers them power at a small cost.

- Booking
- Sampling
- Result Maintenance
- Bill Entry

## Pharmacy

- Purchase
- Sales
- Stock
- Maintenance

Patient History

Inpatient Bill Estimate

Sales Return

# Aasha 1.0 Server

Aasha 1.0 Server version addresses two important aspects of a hospital: the process of consultation and electronic case sheet generation. In addition to these, Aasha 1.0 Server offers amazing reduction in paperwork and also control by connecting these processes with other units like pharmacy, labs, x-ray units and scan centers.

This helps the management retain allied services within the hospital itself. This also allows for efficient patient monitoring as the details of lab tests, X-rays, scans etc are made available at the doctor's desk automatically on completion. This not only saves time, but also removes the use of multiple copies of reports leading to limited use of stationery and allows hospitals to do away with the medical records department totally. There is also a dramatic reduction in time as re-entry of prescriptions and order booking at the labs can be done quicker.

Aasha 1.0 Server also offers In-Patient Management like never before. Patient Ledgers display comprehensive information about all the charges incurred at the various activities involving the patient. Aasha 1.0 Server offers a complete set of basic facilities that will be useful for hospitals of any size.

## Medical Records Management

- Out-Patient and In-Patient registers
- General, Surgical & Financial Information Processing

## In-Patient Management System

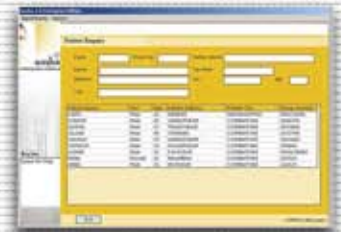

- Room Allotment Management
- Resource Utilization Management
- Maintenance of Patient Ledgers

## Dr. Desk (Consultation)

- Electronic case sheet generation
- Online generation of prescriptions
- Automatic updating of case sheets with information from labs etc.
- Generation of Medical Certificates, Fitness Certificates, Letters and Circulars
- Generation of Surgery Notes, Discharge Summaries, Refer Out Letters etc.
